1   Help on Script-files

A Matlab script-file is a text file with the filename extension *.m* which contains a sequence of Matlab commands.

The script-file can be run from the Matlab prompt by typing its name without the *.m* extension. This is equivalent to typing in the commands line by line at the prompt. Within the script-file, you can access variables you defined earlier in Matlab. All variables in the script-file are global, i.e. after the execution of the script-file, you can access its variables at the Matlab prompt.

2   MATLAB Help on Script-files

```
SCRIPT About MATLAB scripts and M-files.
   A  SCRIPT file is an external file that contains a sequence
   of MATLAB statements.  By typing the filename, subsequent
   MATLAB input is obtained from the file.  SCRIPT files have
   a filename extension of ".m" and are often called "M-files".
   To make a SCRIPT file into a function, see FUNCTION.

   See also type, echo.
