4.1.7. In there there was an equine esophagus with a bolus of feed lodged ...

Author: Brooke Delaney

In there there was an equine esophagus with a bolus of feed lodged in the lumen. If this had been dislodged and the horse had been able to go home instead of being euthanized, what might have been the long term consequence of this episode of choke?

Please choose only one answer:

- after the food bolus was removed, the damaged mucosa might heal with very thickened squamous epithelium arranged in papillary forms that would mechanically block food from moving past this new obstructive lesion
- a stricture might develop as granulation tissue matures and contracts at the site where the food bolus had been lodged
- the wound becomes fibrotic and the horse is now more likely to experience necrotic esophageal disease
- the horse will develop gastric reflux disease

4.1.9. Which of the following is false regarding chemical rumenitis "grain...

Author: Brooke Delaney

Which of the following is false regarding chemical rumenitis "grain overload" ?

Please choose only one answer:

- The diet of fermentable carbohydrates forms lactic acid that lowers pH and kills normal flora of rumen.
- damaged mucosa can be invaded by Fusobacterium or fungi that live in blood vessels.
- Systemic effects include dehydration due to osmotic movement of water into rumen and acidosis due to lactic acid circulation.
- Alkaline pH causes direct damage to mucosa forming a "chemical burn " of rumen wall
- All of the above are true
